Extensions caught reading chats

900K

users hit by two fake AI extensions, one with Google's Featured badge

Dec 2025

8M+

installs of Urban VPN and 7 sister extensions that auto-updated into chat capture

Dec 2025

470K+

users of extensions caught spying on eight AI chat sites

Jun 2026

The advice is "check your permissions". That is minutes per extension, and most people have twenty.

One click. Plain answers.

1

A count

of extensions that can see your AI chats right now

2

A risk level

High risk, check this, or low, for each one

3

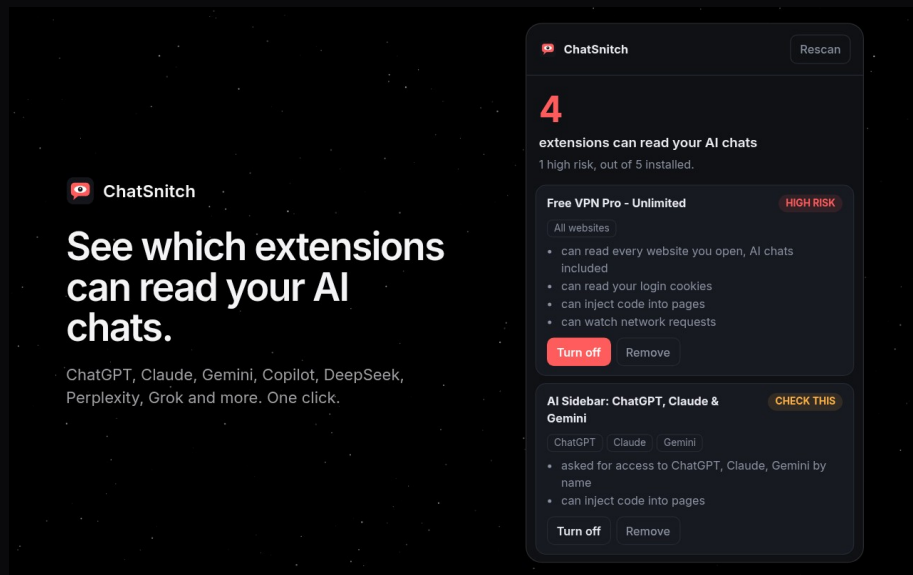

Reasons in plain words

reads every site, reads your cookies, injects code, watches traffic

4

Turn off or Remove

right in the popup, and turn back on if you change your mind

Covers ChatGPT, Claude, Gemini, Copilot, DeepSeek, Perplexity, Grok, Meta AI, Mistral and Poe.

How it decides

1

Collect access

Reads host permissions from chrome.management, plus content-script access parsed from Chrome's own permission warnings, in any UI language.

2

Match AI sites

Checks Chrome match patterns against each AI chat domain. Errs toward flagging.

3

Score

Named AI domains outrank "all sites". Cookies, webRequest, scripting, debugger, clipboard and sideloading each add risk.

High risk

Check this

Low

The most boring extension

1

permission

Only management:
lists extensions and
can turn them off.

0

site access

It can't read any page,
your chats included.

0

network

connect-src 'none'. It
can't phone home.

<300

lines of JS

Plain JavaScript, no
build step. Read it first.

Next

- | | | |
|----------------------------------|--|--------------|
| ☐ | Chrome Web Store listing | in progress |
| ☒ | Every Chrome UI language | done, v0.2.0 |
| ☐ | Firefox build | planned |
| ☐ | Alert when an update adds AI-site access | planned |
| ☐ | Shareable report for IT teams | planned |
